

best access solution for
point-to-point connectivity

BUSINESS SOLUTIONS

Business Connectivity - National

SIZED TO SUIT
YOUR NEEDS

Key benefits to your business

- Bandwidth options between 64 Kbps and 2Mbps to suit customer's needs
- 99.9% Availability Service Level Agreement - Leased Lines offer unrivalled Service Level Agreements (SLAs)
- 24x7x365 SNMP service monitoring: Delivers corporate grade Leased Line connectivity,
- Private and secure - dedicated to your connection only, protecting your mission-critical data traffic.
- Extended coverage - depending upon your bandwidth requirements, a Leased Line variant will provide the widest reach of any data service.
- Instant Connectivity: The dedicated secure circuit ensures an instant connection to transmit data as often as you need.
- Efficient connectivity - The service provides a fast, efficient and virtually error free connection, which improves data and organizational productivity.
- Flat billing System - The charges are based on connection speed, which are a fixed charge, irrespective of usage.

Local Leased Circuit

Local Leased circuit is a locally managed point to point connectivity that allows you to communicate and exchange information between 2 sites say, Head quarter and branch. It is a dedicated circuit of certain bandwidth between customer premises.

Local Leased Circuit is a managed service offering a communication link between two national locations (point to point) for an end-to-end dedicated connection. It provides national organizations (to communicate and exchange information) with an exclusive and dedicated communication link between their offices.

Point to point microwave

Etisalcom Point to point microwave is a wireless dedicated secure point-to-point connection. Etisalcom has the right solution in place for frequencies over FREE band and over Licensed frequency.

Our wireless transport solutions for private networks enable efficient, self-contained networking, without relying on leased circuits or fiber and without spending huge amounts on recurring operational costs.

Our microwave digital radios support voice, video and high-speed native Ethernet data for any size business, agency or organization.

Key benefits to your business

High speed transport for all types of Ethernet data

Scalable native Ethernet support

Ultra-reliable for critical applications

Professional-grade license-exempt wireless solutions for convenience and fast rollout

High-availability, interference-free operation using licensed & unlicensed frequency bands

Predictable, guaranteed throughput regardless of the conditions

Packages
